Temple University
The Fox School of Business

ANNOUNCES A
Seminar

Dr. Sudip Bose
Department of Statistics
George Washington University

will speak on

Bayesian Statistics and Induction

Time: 3:00 – 4:00 PM
Date: Wednesday, November 14, 2012
Place: Alter Hall 231

Abstract

Suppose one is interested in knowing whether all members of a population share a common trait— for example are all crows black? Such problems have been analyzed using probabilistic methods at least since the times of Laplace and Bayes. The work of Broad and Jeffreys included interesting results for finite populations. I. J. Good presented a thought-provoking example. We present some recent research related to this area and also discuss this in a two-by-two setting.
